PRODUCT DATA SHEET

Nonadecenoic acid (cis-10)

Catalog number: 1205
Synonyms: Nonadecenoic acid (cis-10); C19:1 (cis-10) fatty acid
Source: synthetic
Solubility: chloroform, hexane, ethyl ether
CAS number: 73033-09-7

Molecular Formula: C_{19}H_{36}O_{2}
Molecular Weight: 296
Storage: -20°C
Purity: TLC: 99%, GC >99%
TLC System: hexane/ethyl ether/acetic acid (70:30:1)
Appearance: liquid

Application Notes:
This high purity monounsaturated fatty acid is ideal as a standard and for biological systems. Being an odd numbered long-chain fatty acid that is unusual in most biological systems it is often useful as an internal standard and for comparison against other fatty acids. A cis-10-Nonadecenoic acid, as well as other monounsaturated fatty acids, demonstrates human p53 DNA binding domain inhibition. This fatty acid has a cis double bond at an even carbon (carbon 10) and therefore cannot be enzymatically degraded via the usual beta-oxidation pathway. Instead, a reductase-isomerase or an epimerase pathway must be employed in the metabolism of this fatty acid.
