

PRODUCT DATA SHEET

9(Z),11(Z)-Octadecadienoic acid

Catalog No: 1248

Common Name: 9-*cis*,11-*cis* CLA

Source: Synthetic

Solubility: chloroform, ethanol, methanol,
ethyl ether

CAS No: 544-40-7

Molecular Weight: 280

Storage: -20°C

Purity: TLC >96%, GC >96%; identity
confirmed by MS

TLC System: hexane/ethyl ether/acetic acid
(80:20:1 by Vol.)

Appearance: solid

Molecular Formula: C₁₈H₃₂O₂

Application notes:

9(Z),11(Z)-Octadecadienoic acid is a conjugated linoleic acid (CLA), an isomer of linoleic acid. CLA is found mostly in lipids originating in ruminant animals including dairy products. It has several biological properties including anti-carcinogenic activity, suppressing *in vitro* growth of human melanoma, colorectal, and breast cancer cells, and exhibiting anti-atherogenic activity.¹ It is thought that CLA itself may not have anti-oxidant capabilities but may produce substances which protect cells from the detrimental effects of peroxides. Due to its being a minor component it is very helpful as a comparison to the major isomers 9(Z),11(E)-CLA and 10(E),12(Z)-CLA. 9(Z),11(Z)-CLA has been demonstrated to have a more potent antiproliferative effect than the more common 9(Z),11(E)-CLA isomer when incubated with human colon cancer cells.
