

PRODUCT DATA SHEET

Methyl 3-hydroxynonanoate

Catalog number: 1726

Common names: 3-Hydroxy C9:0 methyl ester

Source: synthetic

Solubility: chloroform, ethanol, ethyl ether

CAS number: 83968-06-3

Molecular Formula: C₁₀H₂₀O₃

Molecular Weight: 188

Storage: -20°C

Purity: TLC >98%, GC >98%; identity confirmed by MS

TLC System: hexane/ethyl ether (70:30 by vol.)

Appearance: liquid

Application Notes:

This 3-hydroxynonanoic acid methyl ester is a high purity standard that is ideal for analysis and biological systems. 3-Hydroxy fatty acids are intermediates in fatty acid biosynthesis and have been found to be converted to the *omega*-fatty acid by the enzyme CYP4F11 and then into dicarboxylic acids *in vivo*.¹ 3-Hydroxy fatty acids are used as biomarkers for fatty acid oxidative disorders of both the long- and short-chain 3-hydroxy-acyl-CoA dehydrogenases.² Polyhydroxyalkenoates, polyesters produced by bacteria fermentation, are used for carbon and energy storage and are of interest in studies regarding their synthesis, properties and mechanisms and are used as biodegradable plastics.³ Medium chain-length polyhydroxyalkenoate monomers may have pharmaceutical properties.
