

PRODUCT DATA SHEET

Methyl-3-hydroxydodecanoate

Catalog number: 1732

Common Name: 3-Hydroxy C12:0 methyl ester

Source: synthetic

Solubility: chloroform, ethyl ether, ethanol

CAS number: 85464-97-7

Molecular Formula: C₁₃H₂₆O₃

Molecular Weight: 230

Storage: -20°C

Purity: TLC >98%, GC >98%; identity confirmed by MS

TLC System: hexane/ethyl ether, (85:15)

Appearance: liquid

Application Notes:

This 3-hydroxydodecanoic acid methyl ester is a high purity standard that is useful for the investigation of disorders and diseases. Polyhydroxyalkenoates, polyesters produced by bacteria fermentation, are used for carbon and energy storage and are of interest in studies regarding their synthesis, properties and mechanisms. Medium chain-length polyhydroxyalkenoate monomers such as 3-hydroxydodecanoic acid may have pharmaceutical properties. The biologically natural chiral (R)-3-hydroxydodecanoic acid is an intermediate in fatty acid biosynthesis. 3-Hydroxydodecanoic acid is the major fatty acid in some lipopolysaccharides.¹ 3-hydroxy fatty acids are used as biomarkers for fatty acid oxidative disorders of both the long- and short-chain 3-hydroxy-acyl-CoA dehydrogenases.^{2,3}
